**Subject:** Microsoft Settlement

I am disappointed in the proposed settlement with Microsoft. The findings of fact starkly demonstrate how anti-consumer Microsoft has been, but this settlement does virtually nothing to halt these anti-competitive practices, or to punish them for all these previous acts. At a minimum, the API's need to be opened up, and security vulnerabilities should be required to be made public. The break-up ruling still seems much more fair than any other solution I've seen.
